

Log in to VBA Go with your normal VBA username and password.
Go to VBA to register or reset if you have forgotten your details

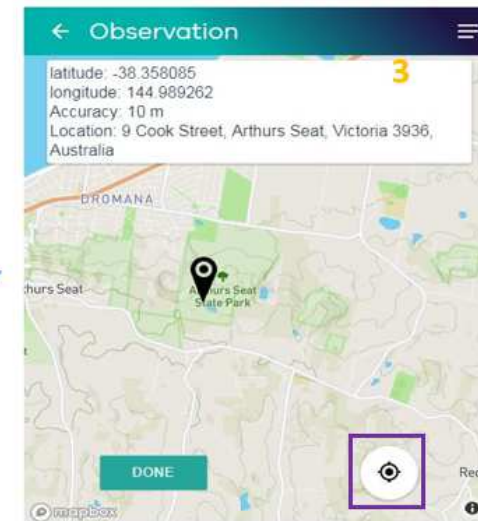

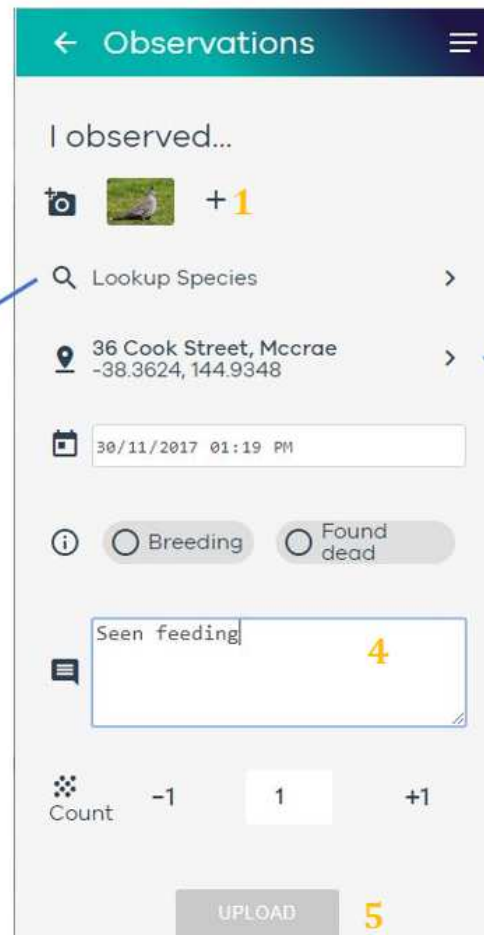

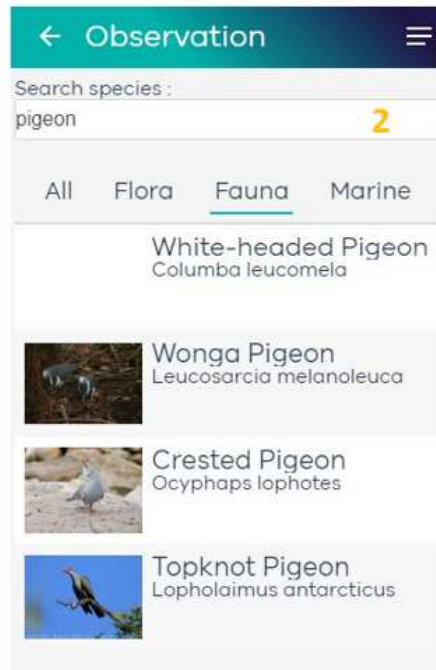

The first screen you see will list all your previous general observations entered in the VBA

Click on the Add button to record your new observation.

VBA Go – How to add a new observation

1. Upload a photo of the species seen
2. Search for the species name from **Lookup Species** area. If you don't know exactly you can use the genus level, e.g. Arum spp.

3. Location is filled in from you photo if the location services are on. If not, select Edit Location and move the map into the approximate location in Victoria, zoom in or use your current location with the compass button highlighted above. Select **Done** to return to the observation information.
4. Add any notes on the observation, information like breeding or road kill can be added in the **Extra Information** dropdown, and a **count** of individuals seen
5. **Upload** – you will get a message saying Upload Success once it is safely submitted into the VBA database.
